

These are the Objectives we were able to study until March.  
We will use this information to decide what to practice on IXL.

Estos son los Objetivos que pudimos estudiar hasta marzo.  
Utilizaremos esta información para decidir que ejercicios practicar en IXL.

## 8<sup>th</sup> Grade (Grado octavo)

### Number and Number Sense

8.1 The student will compare and order real numbers.

8.2 The student will describe the relationships between the subsets of the real number system.

8.3 The student will

a) estimate and determine the two consecutive integers between which a square root lies;

and

b) determine both the positive and negative square roots of a given perfect square.

### Computation and Estimation

8.4 The student will solve practical problems involving consumer applications.

### Measurement and Geometry

8.5 The student will use the relationships among pairs of angles that are vertical angles, adjacent angles, supplementary angles, and complementary angles to determine the measure of unknown angles.

8.6 The student will

a) solve problems, including practical problems, involving volume and surface area of cones and square-based pyramids; and

b) describe how changing one measured attribute of a rectangular prism affects the volume and surface area.

8.7 The student will

a) given a polygon, apply transformations, to include translations, reflections, and dilations, in the coordinate plane; and

b) identify practical applications of transformations.

8.8 The student will construct a three-dimensional model, given the top or bottom, side, and front views.

8.9 The student will

- a) verify the Pythagorean Theorem; and
- b) apply the Pythagorean Theorem.

8.10 The student will solve area and perimeter problems, including practical problems, involving composite plane figures.

### Patterns, Functions, and Algebra

8.14 The student will

- a) evaluate an algebraic expression for given replacement values of the variables; and
- b) simplify algebraic expressions in one variable.

8.15 The student will

- a) determine whether a given relation is a function; and
- b) determine the domain and range of a function.

8.16 The student will

- a) recognize and describe the graph of a linear function with a slope that is positive, negative, or zero;
- b) identify the slope and y-intercept of a linear function, given a table of values, a graph, or an equation in  $y = mx + b$  form;
- c) determine the independent and dependent variable, given a practical situation modeled by a linear function;
- d) graph a linear function given the equation in  $y = mx + b$  form; and
- e) make connections between and among representations of a linear function using verbal descriptions, tables, equations, and graphs.

8.17 The student will solve multistep linear equations in one variable with the variable on one or both sides of the equation, including practical problems that require the solution of a multistep linear equation in one variable.

8.18 The student will solve multistep linear inequalities in one variable with the variable on one or both sides of the inequality symbol, including practical problems, and graph the solution on a number line.
